Mechanical Engineer (B.Sc., M.Sc. expected 01/2027) **Nationality:** German · **Available from:** 1 February 2027

Process Optimization, Production Engineering, Operational Excellence

PROFILE

Mechanical engineer (B.Sc.) specializing in process optimization, production engineering and operational excellence; currently pursuing an M.Sc. in Production Engineering and Management at Hamburg University of Applied Sciences (HAW Hamburg). Almost three years of industry experience at Lufthansa Technik, Philips and Abbott in analyzing and stabilizing manufacturing and maintenance processes, implementing Total Productive Maintenance (TPM), qualifying production equipment (IQ/OQ/PQ) and industrializing automated assembly processes. Solid methodological background in Lean, TPM, PFMEA and root cause analysis; cross-functional implementation of technical improvements between production, maintenance and quality.

PROFESSIONAL EXPERIENCE

Lufthansa Technik | Hamburg

Nov 2025 – Jan 2027

Process Optimization, Engine Services | *Working Student*

Focus: equipment availability, TPM and process standardization in engine maintenance

- As-is analysis of shop-floor work and equipment processes on furnaces, machining, painting and metalworking equipment to identify potential for higher process stability and availability
- Downtime analyses based on failure data and structured root cause analysis using 5-Why and Ishikawa; derivation of technical and organizational corrective actions to reduce equipment breakdowns
- Co-driving the TPM rollout with a focus on autonomous maintenance; follow-up of improvement and maintenance measures in the action plan
- Optimization of shop-floor workflows; development of standard work and cleaning, inspection and maintenance standards for reproducible process quality
- Standardized work instructions, digital training materials and instructional videos; technical training for production staff
- Interface coordination between production, maintenance and technical departments: alignment of technical workflows, definition of implementation requirements and support of shop-floor implementation

Philips | Hamburg

Nov 2023 – Jul 2025

Intern | *Process and Quality Engineering*

Focus: industrialization, quality assurance and equipment qualification in medical technology

- Project lead for the introduction of automated assembly systems from planning to operator qualification; standardization of screwdriving processes and error prevention based on the poka-yoke principle
- Data-driven analysis of production disruptions using Excel and Power BI; structured root cause analysis in cross-functional teams and derivation of measures to stabilize manufacturing
- Assessment of process risks using PFMEA and preparation of business cases as a basis for decisions on improvement measures
- Qualification and validation of production equipment, including electroplating lines, according to EQ/IQ/OQ/PQ
- Translation of actual manufacturing workflows into standard operating procedures (SOPs); revision, maintenance and release of technical documentation in Windchill (PLM)
- Further development of the manufacturing execution system (MES) and digitalization of project management processes with Power Apps, including user training for project managers

Abbott | Hamburg

Nov 2024 – May 2025

Working Student | *Technical Product Designer*

Focus: design and production-related problem solving for mechatronic laboratory automation systems

- Design for manufacturing and assembly (DfM/DfA) of components, assemblies and mechanisms for mechatronic laboratory automation systems (GLP Systems Track) in SolidWorks; management of engineering data in Teamcenter (PLM)
- Resolution of technical issues on manufacturing and assembly lines and review of technical documentation for compliance with ISO 9001, RoHS and REACH
- Development and testing of 3D-printed prototypes for iterative validation and optimization of design solutions
- Cost analyses for project planning and coordination of supplier quotation requests for procurement decisions

HAWKS Racing | Hamburg

Apr 2024 – Jul 2025

Temporary Position | *Production Planning and CNC Manufacturing of Race Car Wheel Hubs*

Focus: manufacturing technology and machining

- Production planning for race car wheel hubs: definition of the machining sequence according to technical requirements and procurement of tools and materials
- CAM programming of CNC machining with Siemens NX and SinuTrain; adaptation of programs for series production
- Independent manufacturing on CNC lathes and machining centers (SINUMERIK), including inspection of tight tolerances and required surface finishes

EDUCATION

M.Sc. Production Engineering and Management Oct 2025 – Jan 2027 (expected)

Hamburg University of Applied Sciences (HAW Hamburg) | Expected graduation: January 2027

Focus areas: operations and project management, production systems, supply chain management, factory planning and sustainable process and production management

B.Sc. Mechanical Engineering & Production Aug 2020 – Jul 2025

Hamburg University of Applied Sciences (HAW Hamburg)

Focus areas: production engineering, lean management, manufacturing processes and cost-effectiveness; design, simulation, mechatronics and industrial digitalization

Bachelor's thesis at Philips: “Design of a Digital Test Fixture for Aligning X-Ray Tubes in Radiation Protection Housings”

ACADEMIC PROJECTS

Master's Project: Lean Business Simulation with Deutsche Bahn | Hamburg Oct 2025 – Jun 2026

- Process analysis and optimization of the business simulation using swimlane diagrams, SIPOC and business process analysis to teach lean principles and process understanding along the value chain
- Agile further development in a cross-functional team (sprints, retrospectives) and onboarding of staff in its application

Project: Production Planning for a Hydraulic Cylinder Oct 2024 – Jan 2025

- Planning of the manufacturing sequence and selection of machine tools based on technical drawings, process parameters and customer takt time
- Design of a production layout according to lean principles (Kaizen, just-in-time), including an economic evaluation of the production concept

Bachelor's Project: Autonomous Mobile Robot | Hamburg Apr 2024 – Aug 2024

- Integration of actuators, LiDAR and camera systems using Arduino/C++, Raspberry Pi/Python and ROS2 for navigation and image processing; work packages handled in a Scrum team with Jira and Git/GitHub

ADDITIONAL EXPERIENCE

Freelancer | Product Development and Transfer to Production | Hamburg Jan 2025 – present

- Product and tool development from concept to 3D-printed prototype, including a stamp for spray heads enabling more efficient product provisioning
- Industrialization: technical coordination with international suppliers, including suppliers in China, for the transfer into series production

SKILLS AND TOOLS

Process & Manufacturing Engineering: process analysis and optimization, process standardization, manufacturing and production planning, equipment optimization, industrialization

Operational Excellence & Lean: TPM incl. autonomous maintenance, continuous improvement (CIP/Kaizen), lean manufacturing (Kaizen, just-in-time, poka-yoke), downtime analysis, standard work, action management

Quality & Validation: PFMEA, root cause analysis (5-Why, Ishikawa), equipment qualification (IQ/OQ/PQ), SOPs, ISO 9001, RoHS/REACH, technical documentation

Projects & Interfaces: technical project management, implementation management, stakeholder coordination, Scrum

Data & Systems: Excel, Power BI, Power Apps, SAP ERP, MES, Windchill, Teamcenter, MS Office, Jira, Python, SQL

Design & Manufacturing: DfM/DfA, SolidWorks, Siemens NX (CAD/CAM), SinuTrain, SINUMERIK, Siemens TIA Portal, 3D printing, Git

LANGUAGES AND FURTHER INFORMATION

Nationality: German

Languages: German and Persian (native) · English (fluent) · Arabic (good basic knowledge)

Since Feb 2026: WE Buddy, HAW Hamburg – mentoring an international exchange student with study organization and integration

Since Jan 2022: Rahmat e.V. – teaching Arabic and providing educational support for children and young people

Since Aug 2024: Visual communication – photo, video and graphic design, including for Philips (Adobe Premiere Pro, Illustrator, Canva)
